                                                                                                                                                                                                                                                                  US-10-494-893A-3

Sequence 3, Application US/10434893A

Publication No. US20040060083A1

GENERAL INFORMATION:

APPLICANT: Ahmed Regina
APPLICANT: Sadequr Rahman

TITLE OF INVENTION: Barley with altered branching enzyme activity and starch and star

FILE REFERENCE: 69425

CURRENT FILING DATE: 2003-05-09

NUMBER OF SEQ ID NOS: 11

SOFTWARE: Patentin version 2.1

SEQ ID NO 3

LENGTH: 11476

TYPE: DNA

ORGANISM: Aegilops tauschii
FEATURE:

NAMB/KEY: MISC FEATURE

LOCATION: (1)...(11476)

OTHER INFORMATION: n is a, c, g or t
FEATURE:

FEATURE:

OTHER INFORMATION: SSBEIIa gene

/note="Vector: pSPORTI; Site_1: SalI; Site_2: NotI; Plants
were grown in a glasshouse. Anther meiotic stage was
determined by removing anthers from individual primary
florets. One anther was sacrificed for microscopic
staging, and if determined to be between (and including)
meiotic stages pre-meiosis and metaphase I, the remaining
two anthers were collected and pooled for library
construction. The tissue, total RNA, and poly(A) RNA were
                                                                                                                                                                                                                                                                                                                          ocation/Qualifiers,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             60
```

ORIGIN

were harvested, total RNA and poly(A) RNA were prepared, a cDNA library was made, and the cDNA clones were in vivo excised to give pBluescript phagemids in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."
